

The Bird Sanctuary - Species list

The following tables list the species that have been recorded in the Sanctuary since 2004. Four additional entries from Gigi Crompton's Cambridgeshire flora have been added; the year of recording is given for these. Some sections give the most recent year of sighting, others (particularly flora, fungi and insects) are cumulative. For the flora a number in the box indicates the date of flowering. Those species recorded as being present are indicated as follows: L = leaf, F = flower, S = seed, X = sighting (or heard or signs or otherwise present), C = caterpillar, D = dead. Some species may be mis-identified. If you note any other species, please add to the list. The list for the grid tetrad TL45j, in which the Sanctuary lies, based on surveys in the area by the Cambridge Natural History Society during 2003 and 2004, is available on the web at <http://www.cnhs.org.uk>. Jonathan Shanklin (j.shanklin@bas.ac.uk).

Species added in 2009 were: Evernia prunastri (lichen), teal, lesser pond sedge, blue anemone, otter, bird's foot trefoil, small catstail, rough hawkbit, narrow-fruited watercress, round-leaved dog rose, hybrid dog rose, great-crested newt, robber fly, badger, branched bur-reed, freshwater shrimp, harlequin ladybird, yellow-flowered strawberry, bee fly, mute swan, lapwing, nuthatch, painted lady, small copper. A new list, covering the decade 2010 – 2019 is now being compiled.
